

HIGH ACCESSIBILITY, HIGH DENSITY FILING —

Its dual row capacity enables Roll-away Thin Line Conserv-a-file to hold many more records in any given area by eliminating some of the aisle space formerly needed. Now, for instance, only one aisle instead of two is required to service four rows of files. Space-saving benefits such as these increase, naturally, with the size of the installation. Further, in contrast to other mobile-type lateral files, the aisles of Roll-away Thin Line Conserv-a-file remain constant.

In addition, the unique design of Thin Line reduces fatigue and improves efficiency by bringing more contents to a lower reference position — e.g. 7 Thin Line tiers fit into approximately the same height as most conventional 6-tier units while folders in the 6th tier rest at about the height of a 4-drawer file.

UP TO 150% GREATER CAPACITY

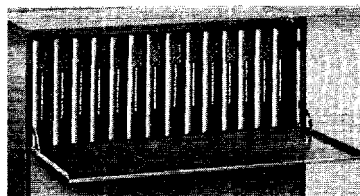

Roll-away Thin Line Conserv-a-files consist of a row of individual 36" wide roller-equipped Thin Lines mounted on rails directly in front of a row of stationary Thin Line Conserv-a-files in a depth of only 27 inches.

To gain access to any of the units behind, any one module or the entire outer row of Roll-away Thin Lines can be easily rolled aside. As a result of this unique juxtaposition of units, Roll-away Thin Line Conserv-a-file offers an enormous increase in storage capacity,* accessibility and efficiency at a cost as little as that of medium priced filing cabinets.

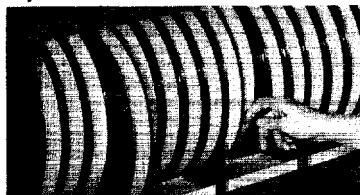

**(In the average installation, Roll-away Thin Line will store 42.4 lineal filing inches per square foot of floor space compared to only 17.5 filing inches per sq. ft. for 4-drawer files. That's an increase of almost 150%!)*

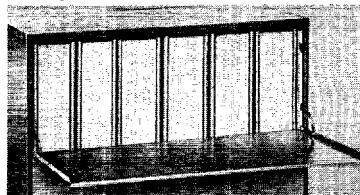

There are Thin Lines to store folders, cards, X-ray films ... catalogs ...

tape reels ...

even print-outs!

REMARKABLY FLEXIBLE —

Roll-away Thin Line Conserv-a-file consists of individual tiers which stack on top of one another, interlock for great strength and require bolts at only two points. No bracing is required. Anyone can put them together ... or take them apart ... quickly. By the very nature of their construction they can be built to any configuration ... can be made to any length or height ... have tiers added on or taken off as needed.

THIN LINES TO STORE MOST ANYTHING

Roll-away Thin Line Conserv-a-files are available in Letter or Legal Size, can be designed to take side or top tab folders or card trays, are available in units specifically designed to store tape-reels, X-ray films, binders, catalogs, and/or print-outs. Letter Size folders, cards, tape reels and catalogs can all be accommodated in the same unit if desired.

REFERENCE SHELF DOORS

Sturdy, easily installed optional doors, which also double as reference shelves, provide complete

Supreme **New Roll-away Thin Line Conserv-a-file®**

offers enormous savings in filing equipment, space and time!

Regular Thin Line Conserv-a-file offers a 25% greater capacity than can be provided by conventional files in the same height because its shelf design eliminates the need for the steel lip structural support. Its shelves are only as thick (.096") as the steel itself.

Roll-away Thin Line Conserv-a-file not only features all the design benefits of regular Thin Line but also adds important benefits pioneered and developed by Supreme for its Conserv-a-file V filing system. See reverse side for details.

Supreme engineers a 2 rows-in-one concept for Thin Line Conserv-a-files that increases capacity up to 75% over lateral files and up to 150% over drawer files!
